

WordPress Maintenance Service

<https://byintention.co/>

Why Do I Need This?

WordPress is extremely popular, powering over 40% of websites! However this makes it a tempting target for hackers. Keeping your WordPress system up to date makes it harder for them to break in.

New features are introduced regularly that can make your site faster and easier to use. Speed is important to maintain search engine results and keeps visitors happy.

We recommend updates are done monthly, but quarterly is OK if you're on a budget.

“Patchstack estimates that 99.31% of all security bugs from 2021 were in components – WordPress plugins and themes.”
